

ITMS 478 SYLLABUS**ITMS 478 Cyber Security Management**

Hours: 3 credit hours / 45 contact hours

Instructor: Ray Trygstad

Textbook, title, author, and year: *Management of Information Security, Sixth Edition*, Michael E. Whitman & Herbert J. Mattord, 2018

Specific course information

- a. **Catalog description:** In-depth examination of topics in the management of information technology security including access control systems & methodology, business continuity & disaster recovery planning, legal issues in information system security, ethics, computer operations security, physical security and security architecture & models using current standards and models.
- b. **Prerequisites:** None.
- c. **Required for Applied Cybersecurity and Information Technology.**

Specific goals for the course

- a. **Course Outcomes:** Each successful student will demonstrate foundation knowledge and application of cybersecurity concepts as they to apply the management of information system security in a large organizational environment. Students will describe and identify policy frameworks, legal and moral implications, and best practices in information security management. Students will be able assist in the conduct of a security audit of an organization and report on the results with appropriate suggestions for amelioration of problem areas identified.
- b. **Course student outcomes:** Upon completion of this course, each student should be able to:
 - Discuss the history of computer security and how it evolved into information security
 - Identify and define key terms and critical concepts of information security
 - Describe the business need for information security
 - Differentiate between laws and ethics, describe the role of ethics in professional practice in information security, and identify major national laws that relate to the practice of information security
 - Define risk management and its role in the Security Systems Development Life Cycle
 - Assist in the preparation and conduct of a cybersecurity audit of an existing business, government agency or organization and prepare a complete audit report with

appropriate suggestions for amelioration of problem areas identified

- Describe management's role in the development, maintenance, and enforcement of information security policy, standards, practices, procedures, and guidelines
- Assist in the design and implementation of a comprehensive enterprise security program using policy and standards to implement technical, operational, and managerial controls
- Recall and describe recommended security management models
- Explain what contingency planning is and how incident response planning, disaster recovery planning, and business continuity plans are related to contingency planning.
- Describe common technical security controls, implementations in an enterprise setting, and how they are driven by policy and standards

Topics to be covered

- a. Introduction to Information Security
- b. Compliance, Legal, Ethical/Professional Issues Governance and Planning for Security
- c. Security Policy
- d. Developing Security Programs
- e. Risk Management I
- f. Risk Management II
- g. The Information Security Audit
- h. Security Management Models
- i. Security Management Practices
- j. Contingency Planning: Disasters/Business Continuity
- k. Security Maintenance and Digital Forensics Protection Mechanisms
- l. HIPAA
